PETITION TO WITHDRAW OFFICE ACTION FINALITY

Applicant respectfully petitions the Commissioner to withdraw the finality of the Office Action dated 14 August 2007 due to that Office Action's failure to address the substance of Applicant's arguments traversing rejections of each of claims 1-52.

MPEP 707.07 requires that an Office Action must be complete as to all matters, must provide a clear explanation of all actions taken, and must answer in detail the substance of each of the submitted arguments.

In response to an Office Action dated 14 February 2007, Applicant filed a proper Reply on 23 May 2007 ("the Reply"), which is incorporated herein by reference. In traversing a rejection of each of claims 1-52, Applicant presented numerous arguments that stand unopposed and unanswered in the present Office Action. For example, at pages 25-26 the Reply argued:

PATENT
APPLICATION 09/822,300
ATTORNEY DOCKET 2000P07515US01 (1009-087)

The present Office Action fails to even identify "the particular problem" the claimed subject matter is involved and notably fails to provide any evidence that Dole is "reasonably pertinent to the problem based on the judgment of a person having ordinary skill in the art."

The present Application states that the field of the invention is "graphical programming languages for programmable logic controllers. In particular, the invention concerns a method and system for standardized storage of graphical programming languages. See Page 1. By contrast, Dole allegedly recites, at the Abstract:

[a]n environment for designing integrated circuits. Computers include browsers for displaying pages of forms, with the computers in communication with a methodology server and a compute server. The methodology server contains design methodologies accessed by the computers, with the design methodologies defining steps of designing and testing of integrated circuits. The computers or methodology server are also in communication with a compute server. The compute server executes electronic design automation tools as requested.

Thus, Dole relates to designing and testing "integrated circuits".

The present Office Action presents no evidence that Dole is "reasonably pertinent to the problem based on the judgment of a person having ordinary skill in the art." Applicant respectfully submits that absent such evidence, Dole cannot be used in a *prima facie* rejection of any of claims 1-52.

The present Office Action fails to respond whatsoever to this previously presented and persuasive argument. In addition, the present Office Action fails to answer in detail the substance of each of Applicant's submitted arguments comprised between pages 26-42 of the Reply. Instead, the present Office Action merely makes repeated vague accusations that somehow Applicant's arguments in the Reply did not comply with the requirements of 37 CFR 1.111(b). Applicant respectfully submits that the arguments of the Reply did comply with 37 CFR 1.111(b). In particular, 37 CFR 1.111(b) states:

PATENT
APPLICATION 09/822,300
ATTORNEY DOCKET 2000P07515US01 (1009-087)

[i]n order to be entitled to reconsideration or further examination, the applicant or patent owner must reply to the Office action. The reply by the applicant or patent owner must be reduced to a writing which distinctly and specifically points out the supposed errors in the examiner's action and must reply to every ground of objection and rejection in the prior Office action. The reply must present arguments pointing out the specific distinctions believed to render the claims, including any newly presented claims, patentable over any applied references. If the reply is with respect to an application, a request may be made that objections or requirements as to form not necessary to further consideration of the claims be held in abeyance until allowable subject matter is indicated. The applicant's or patent owner's reply must appear throughout to be a bona fide attempt to advance the application or the reexamination proceeding to final action. A general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references does not comply with the requirements of this section.

Applicant respectfully submits that the Reply was "reduced to a writing" and pointed out the "errors in the examiner's action". Further, the Reply replied "to every ground of objection and rejection in the prior Office action" as required. The Reply pointed out, for each of claims 1-52, "specific distinctions" and particularly noted claimed subject matter for which evidence was lacking regarding any applied portions of any available relied-upon references teaching that claimed subject matter. In particular, the Reply demonstrated that no *prima facie* rejection was presented regarding any of claims 1-52. Accordingly, Applicant respectfully submits that, that contrary to the unfounded assertions of the present Office Action, the Reply complied fully with 37 CFR 1.111(b).

Applicant further notes that merely attempting to denigrate Applicant's arguments in the Reply does not "answer in detail the substance of each of Applicant's submitted arguments" as required by MPEP 707.07(f).

For at least these reasons, Applicant respectfully requests the withdrawal of the finality of the Office Action dated 14 August 2007.
